Description

This database contains 1,815 infrared spectra of ketone compounds that be used for identification, classification, and verification of these materials.

It can be used in a wide range of industries including: surface coatings, adhesives, thinners, printing inks, cleaning agents, pharmaceuticals, extraction, dewaxing, and chemical intermediates.

Additional Information

Each compound is identified by its chemical name and the method of analysis. Structural formula, molecular formula, molecular weight, synonyms, melting points, boiling points, literature references, and comments are also displayed when available.

This data has been subject to the Sadtler Data Review Protocol™ to provide researchers the highest standard in spectral data today. These rigorous qualifying procedures start at data acquisition and continue throughout the database development process.
