Hummel Industrial Polymers (Vols. 1-3)

By Chemical Concepts. A Wiley Division.

4651 Hummel Industrial Polymers (Vols. 1-3) - 5,000 Spectra

Database by Chemical Concepts. A Wiley Division.

This new collection consists of three volumes containing over 5,000 FT-IR spectra individually reviewed by Professor Dieter O. Hummel. These compounds are actively being used in industry and were collected directly from the manufacturers or research laboratories responsible for their development. Almost all spectra have been run using high resolution (2 cm^{-1}) methods. Most spectra come with the corresponding chemical structure, and contain additional information including trade names, manufacturer, measurement conditions, application, appearance, density, and refractive index. Molecular weight and molecular formula are provided if possible. The Hummel decimal numbering system enables you to easily identify the compound class with which you are working. This enhanced information combined with the spectra make these new Hummel Infrared Standard Collections unique and valuable to all people working in polymer science.
